Constroi Angola – On An Upwards Trend

Constroi Angola offers the international construction industry an attractive and successful market platform, with guaranteed customer contact and the chance to establish lasting business relationships in one of the biggest growth markets of the region. It has been held every year since 2003 and enjoys high regard in the sector. It is well received and recognized by industrial players and trade visitors.

New Business Opportunities – Angola

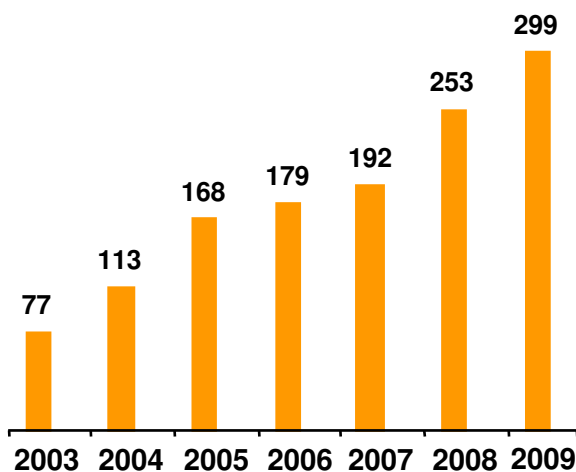

In the future, investment volume in Angola is expected to remain the highest for any country on the African continent. Since the end of the civil war, billions of dollars have been flowing into reconstruction efforts, including an increasingly wide range of projects that emphasize infrastructure and housing. The Ministry of Public Works has released two billion dollars for road and bridge construction alone. Between now and 2012, the construction of 9,000 km of roads will improve connections between the capital, Luanda, and provincial cities. Investment volume in residential construction is also high. The goal is to complete one million new residential units in Angola by the year 2012. To realize this ambitious objective, Parliament has authorized making strategic materials exempt from taxes and customs duties – a move which, above all, affects construction materials and building machinery.

In the year 2008, real growth in Angola, whose most important source of income is petroleum revenues, was 13.2%. Following a slight decline in the year 2009, estimates for 2010 are positive again, with growth expected to be 6.2%.

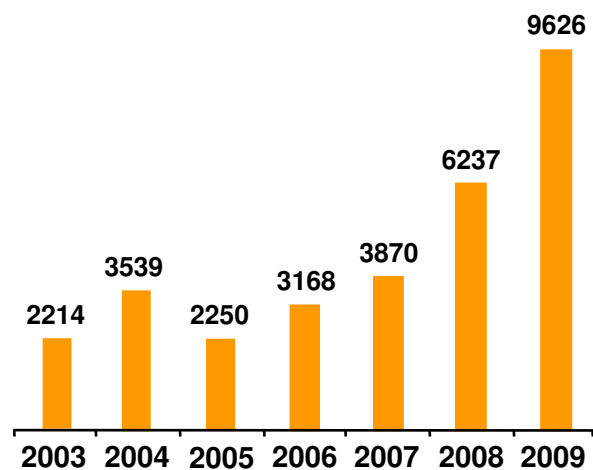

Constroi Angola 2009 Grows

Around 300 brands were represented at the successful Constroi Angola 2009, attracting more than 14,000 visitors to the four-day fair. In comparison to Constroi Angola in 2008, this represents a 18 percent rise in the number of exhibitors. In addition, more than 90 percent of the exhibitors who presented their products at the fair in 2009 commented that they would like to take part in the next edition of the fair.
